

Quiz - Lecture 03

Close your laptops and put away all electronics. No electronics or notes are allowed during the duration of this quiz.

Question 1

Which of the following is a valid Python statement?

Note: `print()` is a function that simply prints whatever value is passed.

- A. `print "Hello"`
- B. `print(Hello)`
- C. `print("Hello")`
- D. `print["Hello"]`

Question 2

What is the output of this code?

Python

```
print(2 + 3 * 4)
```

- A. 20
- B. 14
- C. 24
- D. 9

Question 3

What is the output of this code?

Python

```
print(5 / 2)
```

- A. 2
- B. 2.5
- C. 3
- D. 2.0

Question 4

What is the output of this code?

Python

```
print("2 + 3")
```

- A. 5
- B. 2 + 3
- C. "5"
- D. Error

Question 5

Which line causes a syntax error?

- A. `print(3 + 4)`
- B. `print("Hello")`
- C. `print(3 +)`
- D. `print(7)`

Question 6

What is the output of this code?

Python

```
print(len("Hello"))
```

- A. 5
- B. 4
- C. "Hello"
- D. Error

Question 7

What is the output of this code?

Python

```
print(int(3.9))
```

- A. 4
- B. 3.9
- C. 3
- D. "3"

Question 8

What is the output of this code?

Python

```
print(str(10))
```

- A. 10
- B. str(10)
- C. 10.0
- D. "10"

Question 9

What is the output of this code?

Python

```
print(abs(-7))
```

- A. -7
- B. 0
- C. 7
- D. "7"

Question 10

Can you write the number 65 in binary? Write it as a full byte (i.e. eight bits), like **00000000**. Represent the digits as 0 or 1 (e.g. **01010101**).

Hint: What is 2^6 ?

01000001

Bonus Question 1

What is the output of this code?

Python

```
print(len(str(12345)))
```

- A. 4
- B. "4"
- C. 5
- D. 12345

Bonus Question 2

What are the three parts of a computer in sequence (fastest to slowest / smallest to biggest)?

Note: During the lectures, many different abbreviations and names were mentioned for each part. Any combination of abbreviation or name for each part will suffice. 1/3 of a point will be awarded for each correct answer. Sequence matters (A -> B -> C) with A being the fastest / smallest component.

CPU -> RAM/Memory -> SSD/HDD

Central Processing Unit -> Random Access Memory -> Storage

"Brain" -> Short-term Memory -> Long-term Memory

Bonus Question 3

Can you write the number 244 in ternary? Write it as a full byte (i.e. eight bits), like **00000000**. Represent the digits as 0, 1, or 2 (e.g. **01201201**).

Hint: What is 3^5 ?

00100001
